

Manual Verification - Grade Calculator

Quiz Scores: 9, 10, 8, 7, 9

Teacher's rule: Drop the lowest quiz score.

Lowest quiz = 7

Remaining quizzes = 9, 10, 8, 9

Sum = $9 + 10 + 8 + 9 = 36$

Average = $36 / 4 = 9.0$ (out of 10)

Quiz Percentage = $9.0 \times 10 = 90\%$

The Python program also reports: Lowest Quiz Dropped: 7 Quiz Average: 9.00/10 Quiz Percentage: 90.00% Since the manual calculation matches the program output exactly, the quiz calculation is verified and the program is working correctly for this category.
